

# Living Root Bridge

Mengdi Li (李梦迪)

Have you ever imagined that the infrastructure of architecture will increase in strength and scale over time? Compared with the erosion of traditional bridges, people from the Khasis tribe in northern India guided growing trees across the riverine corridors. The root system of trees grows along the river corridor to withstand the force of the monsoonal rains with the highest levels of precipitation found on earth. The flourish of tourism industries not only brings wealth but also pushes the bridges on the verge of possible collapse due to overuse. Facing a multitude of environmental issues, how could people live in harmony with environments? What is the relationship between natural and human being?

## Instructions

Try to walk around in front of the Kinect camera.
